

The future of food is in our hands

The GM Giants Monsanto and Bayer want control of global food supplies. But people from all walks of life are helping Gene Ethics to safeguard our children and grandchildren's food choices.

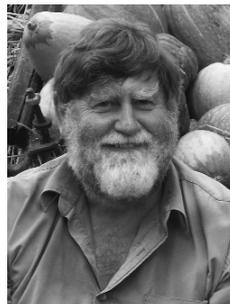

Thank you for being part of our network. Gene Ethics' many successes will continue, with a growing force of over 7,000 concerned citizens working together.

Recently, your support helped Gene Ethics to:

- Distribute 200,000 "Say no to GM" postcards addressed to Premiers, 25,000 news-sheets and 2,000 "GM-Free Zone" signs
- Establish an effective national letter-writing group
- Design and launch a new interactive website
- Write to every local council in Australia to propose GM-free actions which many are implementing
- Coordinate screenings of *The Future of Food*
- Collect 12,000 signatures on the "No Terminator Seed" petition
- Host many prominent speakers, including US author Jeffrey Smith, Canadian farmers Terry Boehm and Arnold Taylor, ETC Group CEO Pat Mooney, two delegations from Japanese food co-ops, Dr Judy Carman and Dr Martin Stapper
- Publish Jeffrey Smith's book *Genetic Roulette - 65 documented health risks of GM foods*, and send a copy to every Australian politician

Gene Ethics leads the campaign for a GM-free future! Your continued support is essential to winning. Please give generously to our work for secure, sustainable, safe and GM-free food for all.

Voices from the network

"I am a long term and passionate supporter of Gene Ethics. Bob Phelps has been phenomenally effective in opposing the introduction of GM seeds. GM threatens biodiversity, sustainable agriculture and our healthy food supply."

— Clive Blazey, Diggers Seeds

"Genetically Manipulated food threatens everything I stand for. It's time to let our Governments and food companies know that we don't want to eat food that has been tampered with. Please support Gene Ethics."

— Margaret Fulton, Cookbook author and chef

"Beautiful fruit and vegies have been growing happily for thousands of years so why are we trying to tamper with nature now? Leave it alone!"

— Vasili Kanidiadis, TV host
Vasili's Garden

"Please support Gene Ethics who protect food choices now and for our grandchildren. Nature gives us good food, not genetic manipulation. I want my grandchildren to taste real, natural and healthy food."

— Stefano de Pieri, Restaurant owner and chef

Voices from the network

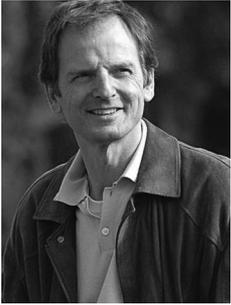

“As the mother of a young child, my concern is for future generations. We can stop GM by working together to make our child care centres, schools and universities GM-free.”

— Cathy Mifsud

“GM will only add to the problems of industrialised agriculture, not solve them. The types of agriculture that should be promoted are the ones without artificial pesticides, fertilisers and genetic manipulation.”

— Dr Maggie Lilith

“Everyone in Australia deserves sufficient, good quality, GM-free food. I believe that we need to engage with the younger generation about the potential impact GM could have on their future.”

— Councillor Heinz Kreutz

“I feel it is vital that we all get involved and inform ourselves of the threats and consequences of a GM-future. We can exercise our consumer power by opting to purchase GM-free products and get active by contacting our government representatives.”

— Daniel Panek

“If GM food is so good why do the majority of Australians not want it? The reason is we've heard the science, found it flawed and completely rejected it.”

— Diane Davie

“When I first found out about GM foods coming into Australia, I immediately wrote to all the companies whose products might contain a GM ingredient. As letters flooded to manufacturers, one by one they started to declare their products to be GM-free.”

— Emily Wallis

“I feel angry that GM crops and foods are not sufficiently tested. It's time to stand together as a community and insist that our health be treated as a priority. Every individual can get active and have a say in the future of our food supply.”

— Vérah Élan

“GM crops and foods will have a devastating impact on the environment and our health. Supporting Gene Ethics and getting active in our community are important steps we can take to ensure Australia remains GM-free.”

— Grant Murray
