

Voices for GM-free food and farms

Peter Cundall AM

Gardener

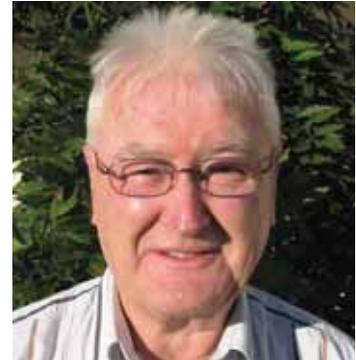

“The reason why GM food is being introduced is for higher corporate profits by controlling what farmers grow while removing consumer choice. Let’s fight back!”

Cr. Samantha Dunn

Councillor, Yarra Ranges

“Our country has a lot to gain by staying GM-free. Gene Ethics is committed to the precautionary principle and promoting real scientific evidence about GM. I encourage you to support their ongoing valuable work.”

Rev. Charles Rue

Columban Mission Coordinator, Justice, Peace and Integrity of Creation

“Biotech control of the food chain is unjust for growers and consumers. Patenting genes is a spiritual affront to God’s free gift of life.”

Dr. Barbara Hoare

General Practitioner

“After reading widely both pro-GM and GM-free information I am not reassured that GM foods are safe for human or animal consumption. I wholly support Gene Ethics’ fight for consumer choice on health grounds.”

Jason Blake

Manager, Leo’s Fine Foods

“Now, more than ever before, we need to ensure that the labelling of all GM food products is required. Please support Gene Ethics, which holds all companies and individuals accountable.”

Fran Murrell

Co-founder of MADGE – Mothers are demystifying Genetic Engineering

“Feeding my family and friends is one of the most important things I do. That’s why I want GM-free food.”

Please also raise your voice and become active for a GM-free future. Contact Gene Ethics to find out how

Voices for GM-free food and farms

Clive Blazey

Founder, Diggers Seed Club

“I am a long term and passionate supporter of Gene Ethics. GM threatens biodiversity, sustainable agriculture and our healthy food supply. Monsanto should be rounded up and composted.”

Julie Woods

Public Health Nutritionist

“GM foods have not been proven to be safe to eat, so please support Gene Ethics to help keep them off our plates!”

Cr. Peter Tagliaferri

Mayor of Fremantle

“It is our responsibility today to protect our right to healthy food, so that the next generation will not pay for our mistakes.”

Julie Newman

Farmer, Network of Concerned Farmers

“GM is the biggest threat to food and agriculture we have ever faced. It's a blatant takeover of the food supply by companies with no regard for health, the environment or the economic sustainability of farmers. Gene Ethics is working tirelessly to protect choice for consumers and farmers.”

Prof. Stephen Leeder AO

Director, Menzies Centre for Health Policy, University of Sydney

“The precautionary principle should be wisely applied to new and unevaluated technologies, especially ones that affect our food and could have widespread environmental impact. There is no need for GM food in Australia.”

Dur-é Dara OAM

Restaurateur

“I am deeply grateful to Gene Ethics for the vigilance and scholarship of their work in exposing the facts of GM food production. Their advocacy is indispensable.”
